

International Oncology Fellowship

Overseas medical practitioner?

Join TACHRC and we'll support your development

We're excited to invite applications for the TACHRC International Medical Fellowship in Oncology.

It's a two-year structured training programme based in UK.

Should your application be successful, you'll expand on your understanding of the field of Oncology, adding valuable professional experience to your résumé.

You'll be a valued member of the TACHRC team, collaborating with and learning from a wide array of consultants, clinicians and other staff. Under supervision from experienced colleagues, you'll work through a personal development plan to develop the skills required to succeed in different branches of surgical, medical and clinical oncology.

We'll even support you to gain post-graduate qualifications from any UK University or support and advise you towards gaining [Royal College](#) membership.

Who are you looking for?

If you're an international medical practitioner with the knowledge and skills in oncology to practice under full registration in the UK, we'd love to hear from you.

You will already have a minimum of three years' clinical experience in Oncology.

And you must meet [the General Medical Council's English language requirements](#). Under the International English Language Testing System, you must achieve an average score of 7.5 across speaking, listening, reading and writing, whilst scoring at least 7.0 in each area.

Don't have GMC registration? It's not a problem. We act as your GMC sponsor.

We need to make sure you're working to at least the level of a UK medical graduate, so we'll comprehensively assess this during the application process.

We'll also put safeguards in place to ensure the standards set out in [the GMC's good medical practice guidelines](#) are met.

How is the Fellowship structured?

Before you join the Fellowship programme, you'll need to have a full induction period.

During this time, you'll be able to acclimatise to your new environment. We'll introduce you to life in the UK - and more specifically, the region where you will be placed- and make sure you're familiar with TACHRC, the National Health Service and the local and national organisations we work alongside.

You'll also have to complete mandatory training sessions on subjects like safeguarding, information governance and restraint reduction techniques.

This is a great time to get to know the staff you'll be working with - and you'll initially be shadowing colleagues in clinical environments rather than working unsupervised.

You'll be working to the [Royal College's core curriculum](#).

What are the positions available?

We currently have no positions available.

I'm interested. What's the next step?

That's great! We're glad to hear you're interested in applying for the Fellowship!
